

Most central readings raise more than the city projected

A \$33 per employee per month tax on firms with 500 or more Chicago employees: \$81M to \$141M on central Census assumptions, against the city's \$82M

Firms are corporate parents (Employer's Expense Tax Ruling #2), counted from establishment records for the City of Chicago in 2025. Government employers are excluded as non-taxable, as are single-location records reporting more employees than their own parent record. Full compliance and no behavioural response are assumed, so these are upper estimates within each scenario.

Base: 243 firms. With no exemptions and the Census central case, a conservative base that also drops franchise networks, rollups above the vendor's corporate total and unverifiable large records gives \$105M, and an upper base that keeps every non-government firm gives \$148M, on the every-employee reading.

Remote adjustment: employees who usually work from home, at American Community Survey 2024 rates by industry for the Chicago metropolitan area, and who live outside the city are removed; firms falling below 500 employees then leave the base entirely. The bounding case assumes every mostly-remote employee lives outside Chicago.
